

Max Hemmerich

Research operations professional improving data quality, reporting, and workflow efficiency in regulated health research.

About

Research operations professional with experience improving data quality, reporting, and workflow efficiency in regulated health research.

My work has spanned clinical study coordination, operational reporting, data-quality workflows, dashboarding, and practical automation in a regulated research environment.

Experience

Research Analyst & Study Lead

Centre for Addiction and Mental Health (CAMH) · Aug 2024 – Sep 2026 · Toronto, ON

Programs: Centre for Youth Bipolar Disorder (CYBD) · Toronto Adolescent & Youth (TAY) Cohort Study

- Built a Power Automate flow to scan a shared calendar and automatically surface research visits (3,000–4,000/year) with no staff assigned.
- Automated EEG lab scheduling with a recurring Power Automate flow, replacing manual weekly availability-block creation for 4 technicians.
- Built and independently shipped a multi-tab HTML recruitment dashboard for the VIBE study, enabling self-serve monitoring for leadership.
- Maintained data quality across 3 concurrent study arms using REDCap and Excel in a regulated research environment.
- Built Python- and Power Automate-supported ingestion and validation workflows for longitudinal datasets with 3,000–4,000 annual event records.
- Conduct structured diagnostic interviews (KSADS, SCID) and contribute to consensus diagnoses with psychiatry teams.
- Collect biosamples and perform retinal imaging to explore biomarkers related to brain health and mental illness.
- Lead MRI and cognitive assessment visits and support EEG acquisition and quality assurance.

Research Assistant

Centre for Addiction and Mental Health (CAMH) · Sep 2023 – Aug 2024 · Toronto, ON

- Facilitated MRI and cognitive visits while supporting protocol adherence and participant comfort.
- Conducted biosample collection and processed clinical data for psychiatric research studies.
- Built Python and Power Automate workflows to support scheduling and operational processes across a longitudinal cohort.
- Developed dashboards tracking recruitment, visit completion, and study milestones for team reporting.
- Managed REDCap databases across concurrent studies under GCP-aligned practices.

Clinical Research Coordinator

UBC Brain Lab · Oct 2022 – Sep 2023 · Vancouver, BC

- Coordinated CAPU RISE, a non-therapeutic clinical trial on cannabinoid effects on stress response, including scheduling, fMRI coordination, and biosample collection.
- Supported data integrity through reconciliation and adverse-event management.
- Assisted with the design and submission of a Health Canada clinical trial application.
- Led study start-up work including REB documentation and site-readiness tasks.

Projects

Project 01

Distill

AI reading interface that turns articles or pasted text into hierarchical, sectioned summaries. Next.js App Router and TypeScript, using the OpenAI API in a three-pane reading layout that preserves footnotes and references.

Project 02

VIBE Dashboard

HTML/CSS recruitment-metrics dashboard for study leadership, enabling self-serve monitoring.

No public link

Project 03

TAY Coverage Gap Flow

Power Automate flow that scans a shared Outlook calendar and surfaces research visits with no staff assigned.

No public link

Project 04
EEG Scheduling Flow

Power Automate workflow that replaced manual weekly availability-block creation for 4 technicians.

No public link

Project 05
Retinal OCT Privacy Utility

Utility to identify and remove patient-identifying fields from retinal OCT exports before research use.

No public link

Project 06
Chalk

SMS habit tracker: text habits daily and track them on a live dashboard. Node.js + Express backend handling Twilio SMS webhooks and cron scheduling, with a React + Vite dashboard reading Supabase.

No public link

Project 07
Mirror

An unlaunched interactive prototype. The build went from an approved product specification to a working interactive prototype verified by an automated harness — Next.js App Router, TypeScript and Tailwind, with Vercel as the deploy target.

No public link

Project 08
BeatTheClose

NBA player-props analytics tool using Python for Kelly sizing, expected-value calculations, and CLV tracking.

No public link

Core Skills

- | | | |
|---|---|--|
| • Power Automate workflow automation | • Python scripting and data-validation automation | • SharePoint, Microsoft 365, Teams, Outlook |
| • Research data quality and reporting | • Dashboard development (HTML/CSS, Power BI) | • SQL and PostgreSQL |
| • Advanced Excel (LET, XLOOKUP, FILTER) | • Recruitment and cohort funnel reporting | • Google Apps Script |
| | • SPSS statistical analysis | • Local LLM experimentation (Ollama, Modelfiles) |
| | | • French (Functional) |

Education

Google Data Analytics Professional Certificate Google Career Certificates, via Coursera · Aug 2026 – Present · Self-paced, online

University of British Columbia BSc, Behavioural Neuroscience · Distinction, GPA 3.9 / 87%, Dean's Honour List · May 2019 – Aug 2023

Simon Fraser University Studies in Economics · GPA 3.9, Dean's Honour List, Alumni Scholarship · Jan 2018 – Apr 2019

North Island College Studies in Mathematics · Jan 2015 – Dec 2015

Credentials

- | | | |
|--|---|---|
| • PL-300 Microsoft Power BI Data Analyst (in progress) | • Health Canada Division 5 Drugs for Clinical Trials Involving Human Subjects | • Transportation of Dangerous Goods (TDG) |
| • CITI Program Clinical Research Coordinator | • MRI Safety Level 1 Personnel | • Suicide Prevention Training |
